Education

Renmin University of China, Master of Economics in Industrial Economics (GPA: 3.7/4.0) Beijing 2024.09–2027.06

Renmin University of China, Bachelor of Management in Business Administration Beijing 2017.09–2021.06

- **CUNEF (affiliated with Complutense University of Madrid)**, Exchange Program Spain 2019.09–2020.02

- **Coursework:** Advanced Microeconomics, Advanced Econometrics, Intermediate Industrial Economics, and Trade Economics.
- **Honors:** First-Class Academic Scholarship, Annual Outstanding Student Award, Community Service Scholarship, Academic Progress Scholarship.

Research Interests

Fields: Industrial policy and structural transformation, fiscal policy, and applications of large language models (LLMs).

Methods: Causal inference, machine learning, and LLM-assisted text analysis.

Research Experience and Outputs

Policy Research and Advisory **Mingming Shi, Guoqing Ou**

- Conducted policy research, including data preparation, case analysis, and drafting policy recommendations.
- Contributed to an internal report that informed policy deliberations and received written feedback from senior decision-makers.

Working Papers

1. From Policy Learning to Policy Congestion **Guoqing Ou, Jianguo Wang**

- Local governments learn policies pioneered by others, but the payoff to policy adoption may depend on how widely the policy has diffused.
- Uses LLM-assisted text analysis to identify investment-promotion policies at the city–industry–year level over the past two decades and to extract policy instruments and other structured information.
- Combines staggered DiD with network analysis to examine how policy adoption among competing cities affects local policy effectiveness, with competition defined by industrial similarity, geographic proximity, province, and city tier.
- Large first-mover gains but declining effects as competing cities adopt similar policies. The attenuation is strongest for mobile industries and weaker for non-rival policies.
- The findings imply policy over-adoption and potential gains from intergovernmental coordination.

2. Fiscal Stimulus Policies under Demand Uncertainty **Guoqing Ou, Ziqi Xu, Jianguo Wang**

- Compares the effectiveness of "investment tax credits", "tax deferrals", and "government procurement" during the COVID-19 pandemic using firm-level data from China.
- DiD estimates show that government procurement had the strongest employment effect, while liquidity support produced modest gains and investment incentives had no statistically significant effect.

3. Platform-Based Data Market Institutions and Firm Productivity: Evidence from Data Exchange Platforms **Mingming Shi, Yingying Ouyang, Guoqing Ou**

- Uses 2011–2023 data on Chinese A-share-listed firms and a staggered DiD design to estimate the effect of data factor marketization on total factor productivity; the findings are robust across alternative specifications and endogeneity checks.
- Develops and tests an "institutional multiplier effect": data factor markets raise productivity by strengthening innovation, lowering transaction costs, and improving information quality, with larger effects among ChiNext-listed firms, firms in highly competitive, capital-intensive, or technology-intensive industries, and growth-stage firms.

Skills

Programming: Proficient in Stata, Python, and MATLAB for data cleaning, econometric analysis, visualization, and automated data processing; experience with LLM APIs and reproducible research workflows.

Text analysis: Independently replicated the methodology in *Decoding China's Industrial Policies*; batch-processed policy documents, converted raw files to JSONL, and cleaned and standardized policy-level information and related metadata. Implemented and refined an LLM-based policy-identification pipeline using prompt design and a two-stage procedure combining full-text scoring with title-based reverse screening, structured JSON outputs, caching, rate limiting, and checkpointing to automate industrial-policy classification and the extraction of policy instruments, subcategories, and supporting excerpts from source documents.

English: College English Test Band 6 (CET-6): 475.

Interests: Chinese calligraphy (second prize in a city-level competition), football, drawing, and film.

Additional Experience

Beijing Association of Guangxi Doctoral Students, Deputy Director, Publicity Department Beijing 2025.11–Present

- Managed publicity planning and content development, including event announcements, social media posts, visual materials, and digital outreach.
- Assisted in organizing academic, career-development, and networking events for Guangxi doctoral students in Beijing.
